

The Effect of the FairTax Implementation on Prices

Applied only at Final Retail Consumption—not business to business purchases including U.S. exports that are now 22% less expensive to overseas buyers and not needing a “Border Adjusted Rebate” to accomplish it. FairTax does not tax Business Consumption to avoid the Tax-Price inflation of Value Added Taxes (VAT’S). We are in an Income VAT. The VAT is the FAT-self-inflicted export tariff.
